

MX4A CONVECTION ACTIVE VACUUM GAUGE

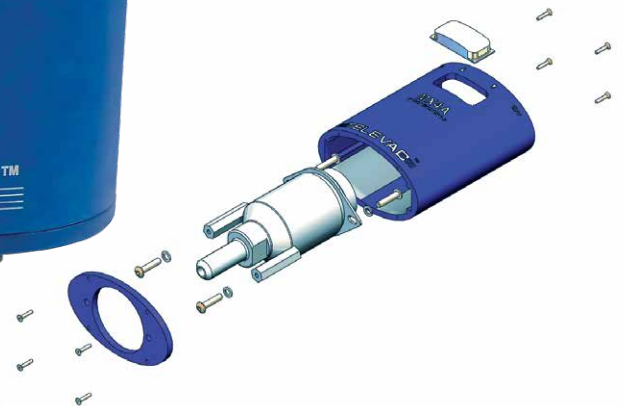

Laser marking of elliptical housing on novel fixture

PROBLEM:

A boutique, low-volume electronics manufacturer sought an ergonomic, novel, and cost-effective housing for their precision industrial measurement device.

SOLUTION:

Complicated electromechanical packaging requirements do not necessarily call for bespoke solutions. JAKTOOL utilized creative sourcing to find off-the-shelf materials that greatly simplified the project. In doing so, we eliminated the need for high-cost custom extrusions, complicated printing, and kept our client's unit cost low.

CONCLUSION:

While every project is unique, JAKTOOL approaches each challenge with the same practical discipline and innovative passion. Exceeding expectations with elegantly engineered solutions is one of JAKTOOL's core values.
